SUMMARY OF QUALIFICATIONS

- Dedicated backend developer with 2.5 years of experience specializing in **Django** and **Python**.
- Passionate about creating efficient, scalable, and maintainable solutions for complex problems.
- Proficient in **DRF**, **JWT**, **PostgreSQL**, and Git, over 3 years of hands-on work in **Linux** environments and familiar with Design Patterns.
- Proven **interpersonal skills**, with the ability to work efficiently both as a team player and independently.

WORK EXPERIENCE

- Segmentation of cardiac MRI images** Oct 2023 – to date
- Working with two different datasets. One **ACDC** dataset with **150** patients and one **MM-WHS** dataset with **60** patients.
 - Developing a module to better train the **U-NET** network with these datasets.
- Train CNN networks with Alzheimer's disease dataset (Classification)** Mar 2023- Jun 2023
- Separation and initial processing of the **ADNI** dataset which includes **1800** patients.
 - Training **Alex Net**, **VGG16**, **VGG19**, etc. networks with this dataset.
 - Reaching **99.27%** accuracy with **VGG19** network.
- Assistant professor in engineering mathematics course** Oct 2022 – Jan 2023
- Creating different questions for quizzes and assignments.
 - Holding troubleshooting classes for students.
 - Correcting student assignments and quizzes.

WORK EXPERIENCE

- Sweet Connect – Social Network**
- A Django Based Social Network.
 - Developed with HackSoft's style guide.
 - integrating SMTP for SMS verification, ensuring secure user authentication.
 - Utilizes DRF and JWT for secure and efficient API management.
 - First try of web sockets for real-time chat functionality.
- Sword**
- A Password manager developed based on Django.
 - The project's frontend was crafted with Tailwind CSS and Flowbite for modern, responsive design.
- Python Projects**
- 2048 – an AI Agent Player using **mini-max** algorithm to Connect and Play on play2048.co website.
 - Music Player – employing **Tkinter** and **PyGame** libraries for user interface and playback functionality.
 - Tic-Tac-Toe – an AI player agents to play as computer, Implemented following Mini-Max algorithm.
 - A web crawler project for data extraction purposes is part of the collection.
 - A Python implementation of the classic game Rock-Paper-Scissors is also included.
 - Additionally, there's a real estate consultancy project within the set of Python projects.
 - etc.

EDUCATION

Bachelor of Computer Science (Software Engineering)

Sept 2018 – 2023

Hamedan University of Technology

VOLUNTEER EXPERIENCE

Quera College - Backend development intern

May 2023 - Jul 2023

A project-oriented course in backend development with django framework and DRF and APIs.
certificated with a perfect score.

Hub (Hamrah Aval Beheshti)- Back-end development intern

Jun 2021 - Sep 2021

An internship dedicated to exploring the Erlang language and Elixir framework, with a particular emphasis on advancing knowledge in programming paradigms, namely Functional Programming, and cultivating expertise in the principles of Clean Code.
